USER INTERFACE DESIGN EXP: 4

UI/UX PROTOTYPE

SANSHIA.J 240701471

1. AIM

The aim of this experiment is to design and develop a mobile e-commerce application prototype for a home bakery using Proto.io. The objective is to create a clean, minimal, and user-friendly interface that allows users to authenticate and browse products easily.

INTRODUCTION

Modern home bakery businesses need simple and attractive mobile applications to improve customer experience. A well-designed interface ensures easy navigation and clear product display.

To address this, a mobile prototype for a Home Bakery was created. The application introduces the brand, allows user login, and enables browsing of various baked goods in a clean and structured layout.

OBJECTIVES

* To design a mobile prototype for a Home Bakery
* To create a simple authentication system (Sign In / Sign Up)
* To implement a clean and structured display for baked products
* To maintain consistent typography, colors, and spacing
* To incorporate familiar navigation elements
* To enhance overall usability and user experience

TOOL USED

Proto.io – A cloud-based prototyping platform used to design interactive and high-fidelity mobile application interfaces.

DESCRIPTION OF THE PROTOTYPE

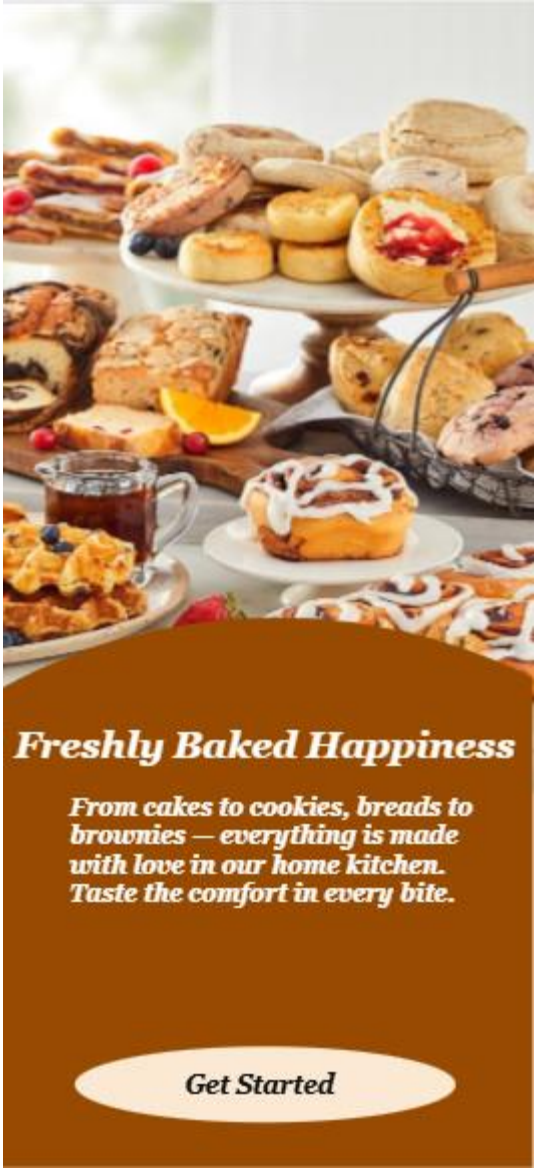
The Home Bakry application consists of three primary screens:

1. Welcome Screen

This is the introductory screen of the application.

Features:
* Brand logo (Top of the screen)
* Main heading: “Freshly Baked Happiness”
* Supporting tagline text
* Short description about homemade baked goods
* Call-to-action button (“Get Started”)

Purpose:
This screen introduces the brand identity and provides users with a clear entry point into the application.

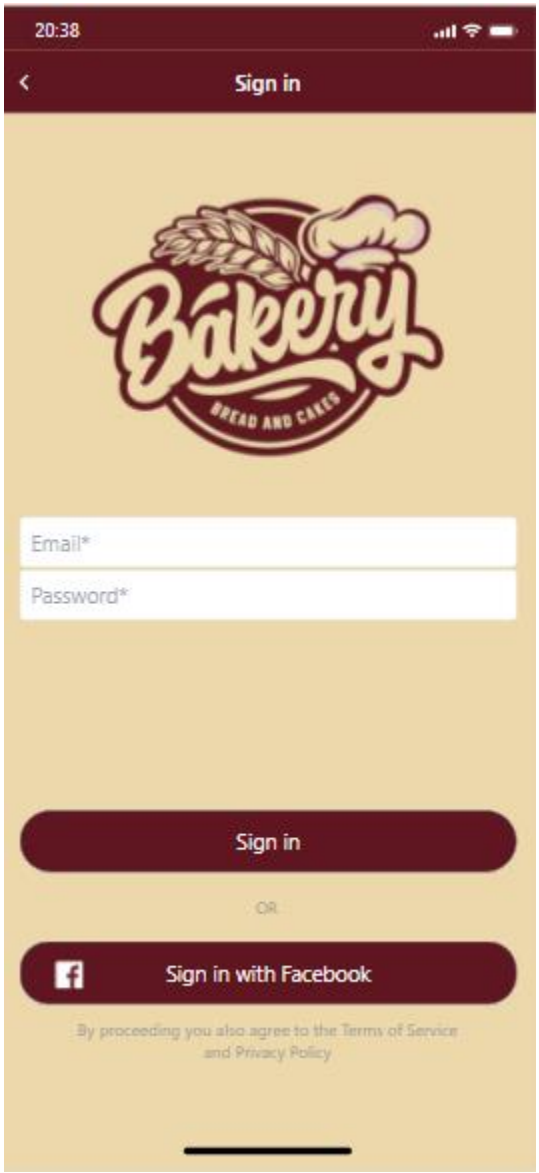


2. Sign In Screen

This screen allows users to log in to their account.

Features:
• “Sign in” heading
• Username input field
• Password input field
• Sign in with Facebook

Purpose:
This screen follows standard authentication design patterns and provides secure access to registered users.

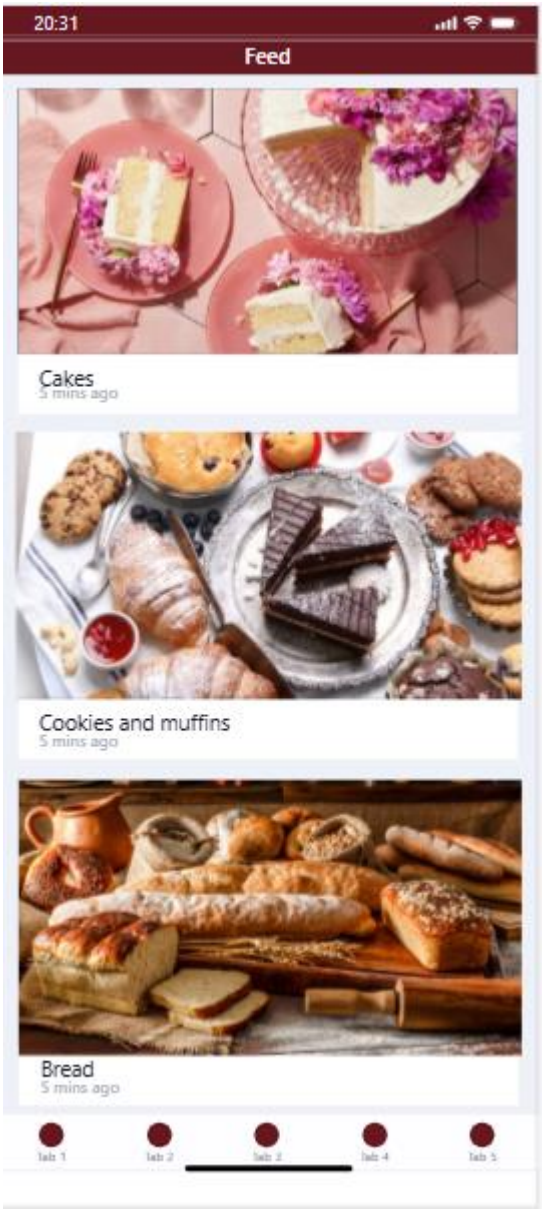


3. Product Display Screen

This screen displays the available clothing products.

Features:
• Categories of baked goods
• Product images
• Product names

Purpose:
This screen allows users to browse products in a structured and organized manner.



FAMILIAR NAVIGATION ELEMENTS

The following familiar UI components were implemented:

- Sign In and Sign Up system
- Username and Password input fields
- Forgot password link
- Grid-based product layout
- Call-to-action buttons
- Scroll-based browsing

These elements reduce the learning curve and make the application intuitive for users.

DESIGN FEATURES

• Minimal brown and beige color theme
• Rounded buttons for modern appearance
• Clear typography hierarchy
• Consistent spacing and alignment
• Simple and uncluttered layout

The design emphasizes readability, simplicity, and brand identity.

RESULT

The Home bakery business application was successfully demonstrates a structured mobile e-commerce interface. The application provides clear navigation, organized product display, and a simple authentication system.

The interface ensures that users can easily access the application, log in securely, and browse clothing products efficiently. The overall design maintains consistency, usability, and a professional appearance.
