EXPERIMENT – Task Analysis and User Flow for an Online Food Ordering System

SANSHIA.J 240701471

AIM

To analyze and document the sequence of steps a user follows while purchasing food in an online food ordering application and represent the process using a user flow diagram.

DESCRIPTION

Online food ordering applications allow users to browse food items, select dishes, add them to the cart, and complete orders using different payment methods. Task analysis helps identify the user's actions and decision points during the ordering process.

The user flow diagram illustrates how a user moves from starting the application to successfully placing an order. It includes stages such as login or registration, viewing the menu, selecting food items, adding them to the cart, choosing a payment method, entering shipping details, and confirming the order.

USER FLOW EXPLANATION

1. Start and Login

The process begins when the user opens the application. The system checks whether the user has an existing account.

- If the user already has an account, they proceed to Log In.
- If the user does not have an account, they are redirected to the Register page to create a new account.

After successful login or registration, the user is directed to the Home Page, where they can browse the menu and start ordering food.

---

2. Login or Register

If the user already has an account, they log in and proceed. If not, they must register before continuing.

---

3. Home Page and View Menu

- The home page shows the main options of the app. Users can navigate to other sections

from here.

- The view menu shows the available food items. Users can choose items to order.

---

4. Select Food Items

- The user selects a desired food item from the menu.

---

5. Add to Cart

- If the user adds a product to the cart, they proceed to payment.
- If they do not add an item, they can continue browsing.

---

6. Payment Process

- If the user wants to proceed, they choose a payment method.
- User can do online payment or Cash On Delivery (COD)

---

7. Payment Confirmation(For Online Payment Only)

If the user chooses online payment, the system verifies the transaction and a confirmation message is displayed.

---

8. Shipping Details

The user enters shipping information such as:

- Name
- Address
- Contact number
- Delivery location

This information is used to deliver the purchased product.

---

9. Order Confirmation

A summary of the order is displayed.

---

10. Order Confirmation

Once the shipping details are confirmed, the order is placed successfully.
The system displays an **order confirmation message** to the user.

---

11. End

The process ends after the order confirmation is displayed.

RESULT

The user flow for an online shoe shopping application was successfully analyzed and represented using a flowchart. The diagram clearly illustrates the sequence of actions and decision points involved in browsing products, selecting items, making payments, and confirming orders. This task analysis helps improve user experience and application design.
