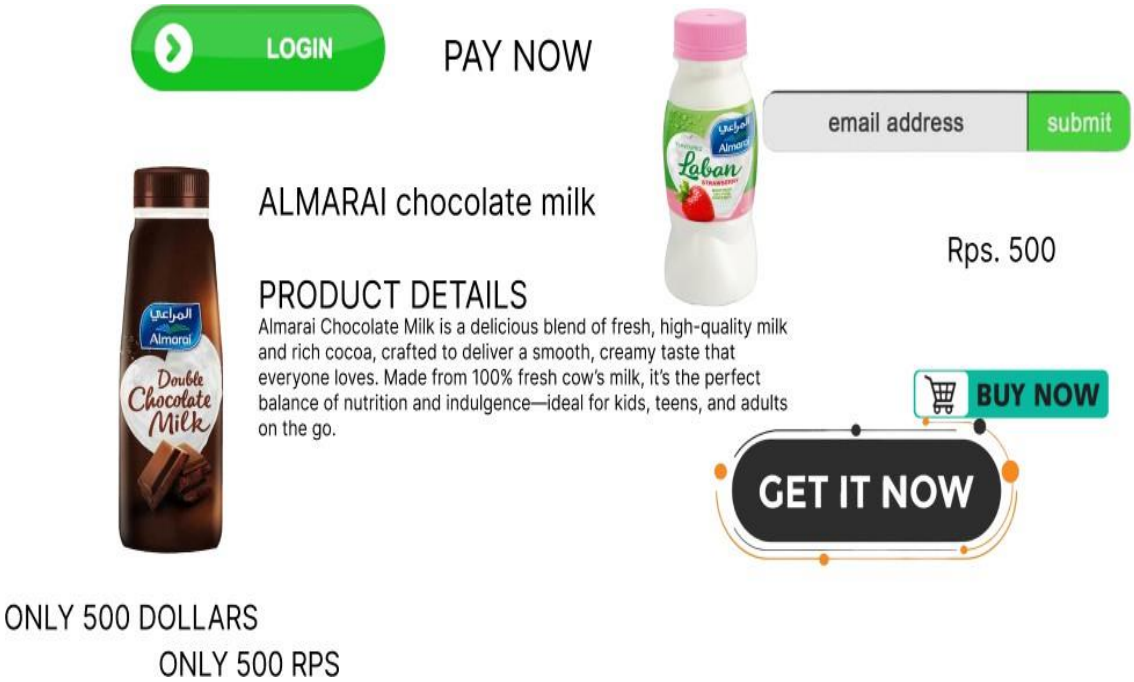
USER INTERFACE DESIGN

EXP:1

GOOD DESIGN VS BAD DESIGN

SANSHIA.J 240701471

Bad Design:



- The design looks so confusing and messy.
- There are too many buttons in different colors and styles that don't match each other.
- This makes the design distracting instead of attractive.
- There are too many messages on the screen so the user doesn't know what to focus on first or what to do.

Good Design:

- This design is clean and easy to understand.
- Everything is well organized and the user’s attention directly goes to the product.
- The colors and styles match making it look attractive.
- There is only one button so the user knows what action to do.
